WZPK Series

P-068

WZPK 系列 铠装铂电阻

(采用引进铂电阻元件)

WZPK Series Armored thermal resistance

(adopted with advanced Pt resistance element)

概述

铠装铂电阻是一种温度传感器，它比装配式铂电阻直径小，易弯曲，抗震性好，适宜安装在装配式铂电阻无法安装的情况。本厂生产的WZPK系列铠装铂电阻采用引进铂电阻测温元件，因此，具有精确、灵敏、热响应时间快、质量稳定、使用寿命长等优点。

铠装铂电阻外保护套采用不锈钢，内充满高密度氧化物质绝缘体，因此，它具有很强的抗污染性能和优良的机械强度，适合安装在环境恶劣的情况。

铠装铂电阻可用于测量-200~500℃范围内温度，可直接用铜导线和二次仪表相连接使用。由于它具有良好的电输出特性，可为显示器、记录仪、调节器、扫描器、数据记录仪以及电脑提供精确的温度变化输入信号，应符合JB/T8622-1997标准。

工作原理

铠装铂电阻工作原理：在温度作用下铂电阻丝的电阻随之变化而变化。显示仪表将会指示出铂电阻产生的电阻值所对应的温度值。

主要技术指标 Main technical Index

分度号 Pt100: A级 $R_{100} = 100 \pm 0.06 \Omega$

B级 $R_{100} = 100 \pm 0.12 \Omega$ Graduation No

量程规格 Measuring range Standard

型号 Model	分度号 Graduation No	测温范围℃ Temperature Measuring range	精度等级 Accuracy degree	允许偏差Δt℃ Allowable difference
WZPK	Pt100	-200~500	A级	$\pm (0.15 \pm 0.002 t)$
			B级	$\pm (0.30 \pm 0.005 t)$

注：式中“t”为感温元件实测温度绝对值

Note: is the absolute value of actual temperature for temperature sensing.

Overall

Armored thermal resistance is a kind of temperature sensor, it has a smaller diameter comparing with The assembly type resistance. And it is easy to Bend with a good anti-vibration, so it is suitable to Install in the place where is not fit to install Assembly type resistance. WZPK series armored Pt resistance made by our company is adopted with Advanced pt resistance temperature measuring element, s So, it has the advantage of high accuracy, and flexible Sensitivity, fast thermal response time, steady quality And long life etc.

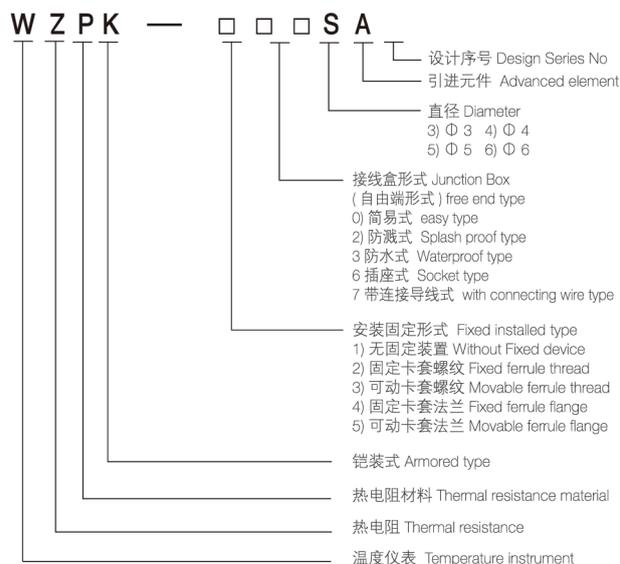

The outside protecting pipe of Armored Pt resistance is made by stainless steel, and the inner side is full Of oxidation material insulator with high density. Therefore, it has a strong anti-pollution property and Excellent mechanical strength, and it is suitable for Dangerous situation.

Armored pt resistance is used for measuring the Temperature from -200 to 500℃ and can be directly Connected with the copper wire and secondary instruments As it has a excellent electric output feature, it can Supply accurate temperature input signal to display instrument, Recorder, adjuster, scanner, data recorder and computer, and is in accord with standard, JB/T8622-1997.

Working principal

Sheathed platinum resistance working principle: platinum wire changes along with temperature change. Displayer will indicate the temperature value corresponding to resistance value.

型号表示 Model

公称压力

一般是指在常温下，保护管所能承受的静态外压而不破裂，实验压力一般采用公称压力的 1.5 倍。实际上，允许公称压力不仅与保护管材料、直径、壁厚有关，而且还与其结构形式、安装方法、置入深度以及被测介质的流速、种类有关。

热响应时间

在温度出现阶跃变化时，热电阻的输出变化至相当于该阶跃变化的 50%，所需的时间，称为热响应时间，用 τ 表示。

热电阻绝缘电阻

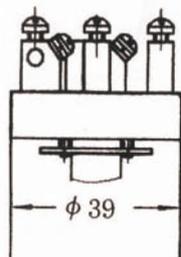

常温绝缘电阻的实验电压可取直流 10~100V 任意值，环境温度在 15~35℃ 范围内，相对湿度应不大于 80%；常温绝缘电阻应不小于 100M Ω 。

热电阻允许通过电流

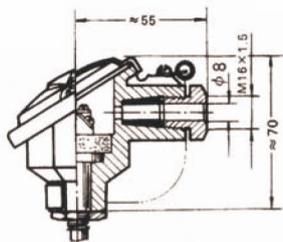

通过铠装铂电阻的测量电流最大不超过 5mA。

Nominal Pressure

Normally in the normal temperature, it's the static pressure the protecting pipe can withstand from outside without breaking, the testing pressure is usually adopted 1.5 times of Nominal pressure. Actually, the allowable PN not only has a relationship with the material, diameter, thickness of pipe, also has a close relationship with its structure, installation method, inserting depth, flow speed and property of measuring medium.

Thermal response time

When temperature step change occurs, thermal resistance output change is 50% of this step change, time needed is thermal response time, marked as τ .

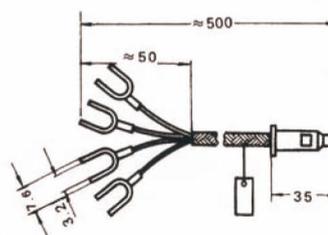

Thermal resistance insulated resistance

The test voltage can be taken any value between 10 to 100V, DC for Normal temperature insulated resistance Environment temperature should be from 15 $^{\circ}\text{C}$ to 35 $^{\circ}\text{C}$, The relative temperature should be not more than 80%. The normal temperature insulated value should be less than 100 M Ω .

Thermal resistance allowable electric current

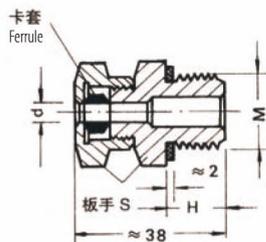

The Max value of measuring electric current though Pt resistance should not be more than 5 mA.
